

Create deliveries

Securely and simply using the web interface

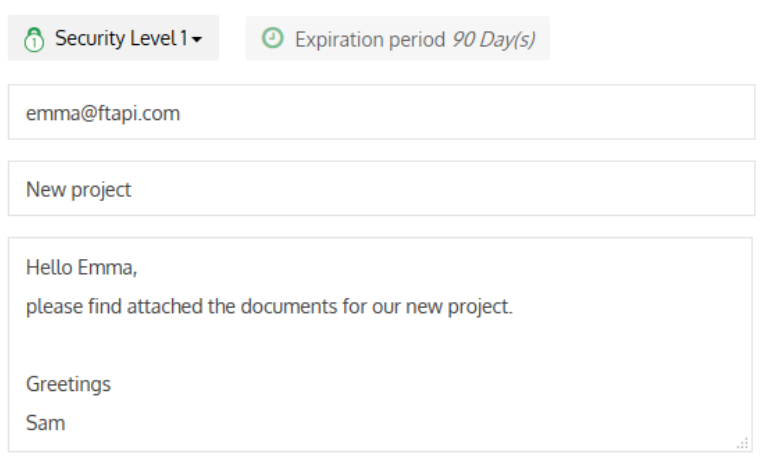

You can use the FTAPI web interface to send files of any type and size with end-to-end encryption – both in-house and outside of your company. FTAPI provides you with the ideal combination of outstanding data security and usability, making a lack of security and high administrative costs a thing of the past. See below for a more detailed description of how to create and send such a mail.

1 Create new delivery

Click new delivery in the web interface and enter the recipient, subject line and your message.

The **autocomplete** feature will help you find recipients.

Security Level 1 ▾ Expiration period 90 Day(s)

emma@ftapi.com

New project

Hello Emma,
please find attached the documents for our new project.

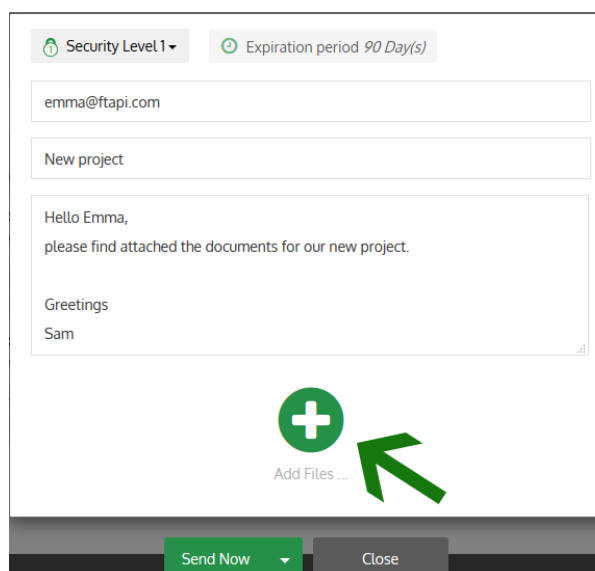

Greetings
Sam

2 Add attachments

There are two ways to attach **any amount of data** to your message.

1. By drag and drop
2. By using the **Attach files** button

You can attach files of **any size** to your delivery.

Security Level 1 ▾ Expiration period 90 Day(s)

emma@ftapi.com

New project

Hello Emma,
please find attached the documents for our new project.

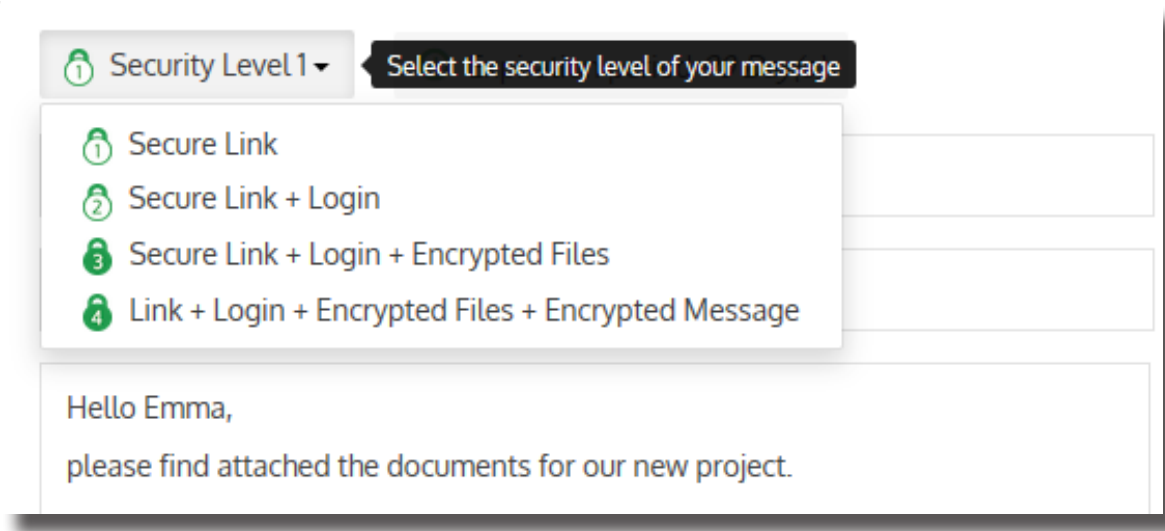

Greetings
Sam

Send Now ▾ Close

3 Select security level

Before sending your message, you can select one of four security levels – from **secure download links** to **complete end-to-end encryption** of text and attachments.

4 Send your delivery securely

If your delivery is ready to be sent, all you need to do is click on the button „**send now**“, which is located under the delivery area.

Haben Sie Sicherheitsstufe 3 oder 4 gewählt, so werden Ihre Daten und / oder Nachricht vor dem Versand zunächst lokal auf Ihrem Gerät verschlüsselt. Dieser Vorgang läuft vollautomatisch im Hintergrund ab. Erst auf dem Endgerät des Empfängers werden die Daten und / oder Nachricht durch die Eingabe des **SecuPass Key** wieder entschlüsselt. Anhand der **durchgängig Ende-zu-Ende verschlüsselten** Übertragung kann niemand außer Ihnen und dem Empfänger die Anhänge öffnen bzw. die Nachricht lesen. Auch nicht FTAPI. Und das macht die Datenübertragung mit FTAPI so sicher.

You will also receive a **download confirmation** e-mail after the recipient has downloaded the attachment.

Description of the security levels

Secure link

Security level 1

The data is stored under a secure link. Anyone who knows this link can open and download the data without requiring an FTAPI account.

Secure link + login

Security level 2

In order to access the data, the recipient requires an FTAPI account. If the recipient does not have an FTAPI account, a guest account will automatically be created for them.

Secure link + login + encrypted files

Security level 3

To decrypt the data, the recipient requires an FTAPI account and the SecuPass key. Creating your SecuPass Key enables you to access the data.

Secure link + login + encrypted files + encrypted message

Security level 4

The entire text and the attached files are end-to-end encrypted. To decrypt the message and data, the recipient requires an FTAPI account and the SecuPass key.
